

EMISSIONS SOLUTIONS: KNOWING YOUR OPTIONS

**WITH ALL THE WORK YOU DO, YOU DON'T WANT
TO THINK ABOUT COMPLYING WITH EMISSIONS
REGULATIONS. BUT YOU SHOULD... NOW.**

Louisiana

EMISSION SOLUTION OPTIONS

Throughout the country and within our local and state governments, emission requirements are rapidly changing. Compliance with emissions regulations is not a choice. In fact, it is mandatory.

Noncompliance penalties can include:

- Hefty fines
- Stepped-up enforcement by local and state agencies
- Bid specifications and site permits that require diesel emissions reductions
- Decreased profit margins and potential job loss
- Legal actions, litigation costs and lost time.

The good news is Louisiana Cat® can help you find the right solution. Our knowledgeable team will provide you with the information, products and services needed to fully comply. A good emission solution is not just about meeting site and permit requirements. A strong partner like Louisiana Cat will help you execute an emissions program that can lower the total cost of

owning your fleet. Louisiana Cat is armed with a suite of solutions tailored to meet and exceed local emissions requirements:

FLEET REVIEW: Louisiana Cat will help you sort through the details of your local emission-reduction program and perform an equipment assessment so your fleet develops the best emission-reduction strategy. And we'll assist you with any required reporting functions.

EQUIPMENT REPLACEMENT: Most new Cat machines are powered by a Tier 3 or Tier 4 engine. Replacing older machines with new ones will significantly reduce your fleet's emissions. Machines with engines below 75 horsepower are Tier 4 certified.

RENTAL EQUIPMENT: Get low-emission Cat equipment for the short or long haul by renting or leasing a low emission machine from Louisiana Cat or Louisiana Rents.
